

M - model  
V - view  
C - controller

it is design pattern

a way to write and manage code

scalable  
extensible

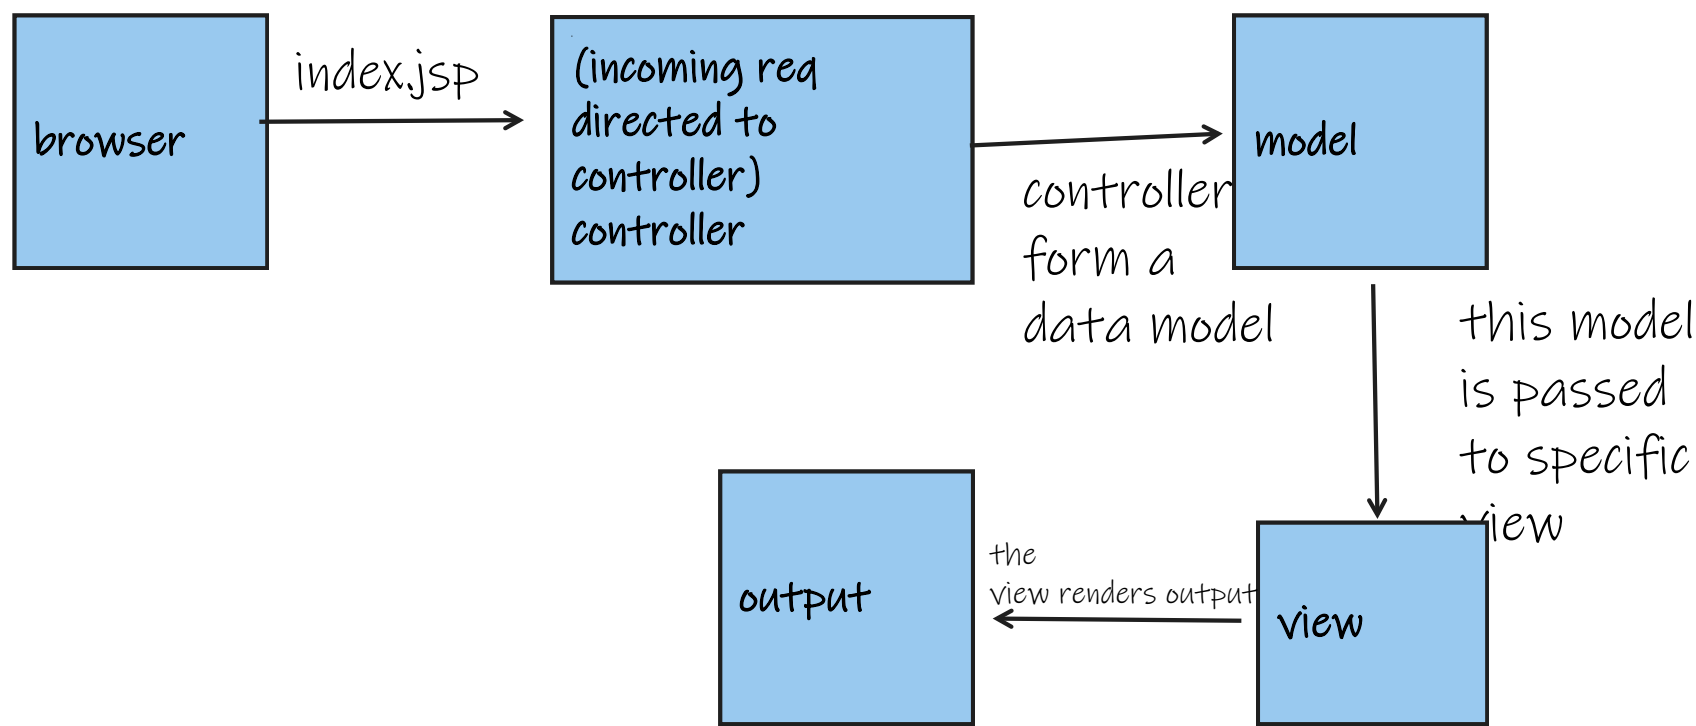

Model component corresponds to all the data related logic

View - is used for all UI logic of application

Controller - process all the business logic and incoming request

it manipulates the data using model component

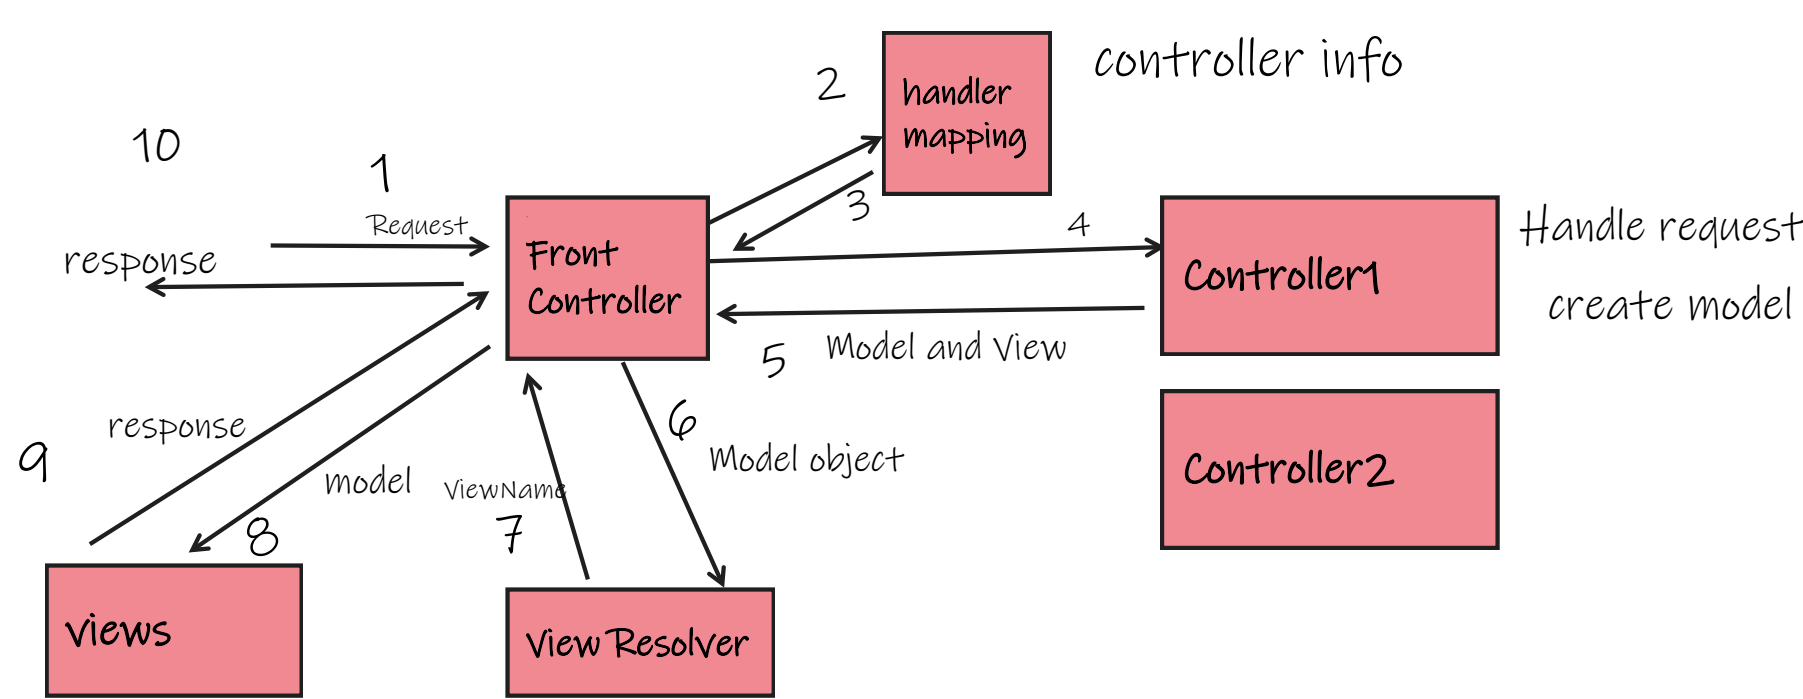

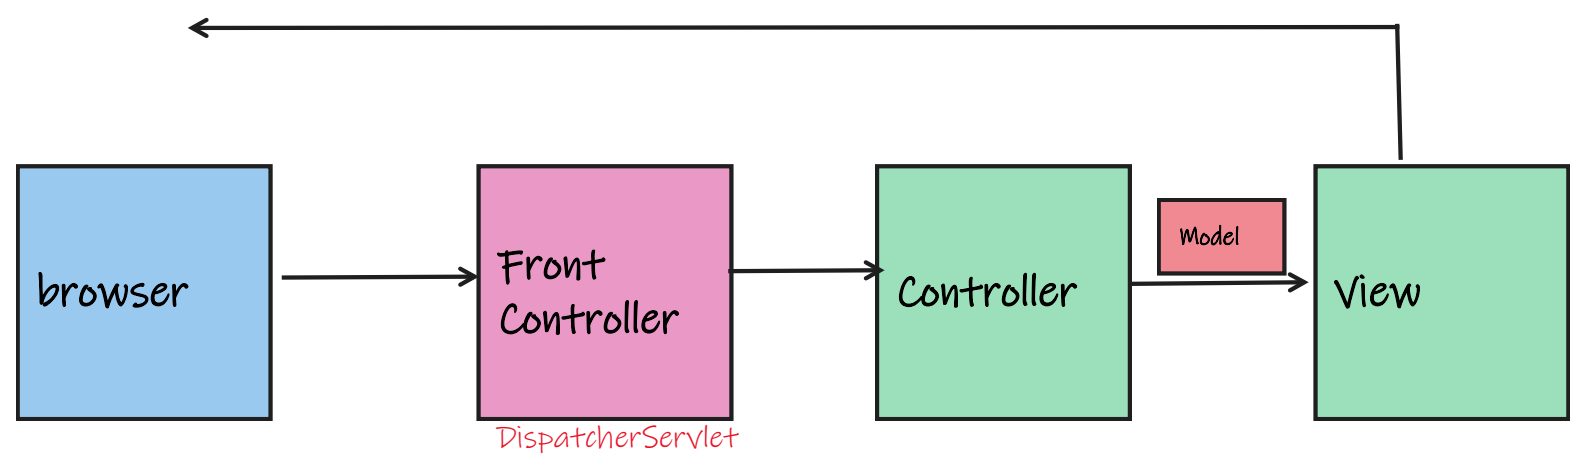

Spring MVC

model  
view  
controller  
Front controller

@Controller

it is responsible for managing the spring mvc app

1) spring boot mvc

2) maven web app

html

JSP

java code - some tags
